

## **Corr Science Wireline Landing Sub for Coiled Tubing Wireline operations**

- The Corr Science wire line landing sub for coil tubing wire line operations is a high-pressure sub made from (17-4) stainless steel.

- The sub uses a cone basket anchor for the termination of the wire line.
- The sub has an “O” ring seal with a neoprene wire cover and grease to prevent pressure from migrating through the wire line to the atmosphere.
- The wires are connected to a collector ring, allowing the tubing with the wire to rotate.
- The sub is designed for different sizes of wire line and coiled tubing. These sizes must be specified before ordering.
